

Free, live, automatic yacht racing.

Linked straight back to your club — your brand, your sponsors.

Every boat on one live map — AIS boats automatically, plus anyone with a GPS tracker or phone — and every visitor sent back to your club, never away. Free.

- **One unified view.** AIS, GPS trackers, phone GPS — any tracker chips in to one live map. It unifies a crowded space instead of adding another silo; the fleet never has to pick one.
- **AIS boats are automatic.** A small receiver hears every AIS boat and records the race by itself — no start button, no crew phones. Watch it live, replay after.
- **Your club stays the front door.** Replays, results and the live map all link back to your club — your brand, your sponsors. We send people to you, never away. Free, no subscription, no lock-in.
- **No compulsory hardware to buy.** It uses the AIS your boats already carry — and phones, watches and other GPS trackers can chip in too, for one unified view. Complements your results platform or boat register — links out and credits the club, never competes.
- **A bonus for skippers.** Plug in your instruments (NMEA) for wind, heel and deeper post-race analysis — once we've got you racing on the map.

**It isn't a boat register or a results system —
it's the live race view that ties every tracker together.**

How it works

- 1 Plug in a small AIS receiver**
At the club or on a boat — a one-time setup.
- 2 It records every race by itself**
The fleet tracks each other. No start button, no phones.
- 3 Watch, replay, publish**
Live on the map, replay after, results in your club's space.

Why we built it

To grow the sport — racing easier to run, more engaging to follow.

One place for the boat, the admin, the analysis and the learning — instead of a dozen apps that each charge for a slice, or need their own siloed hardware.
